Format-Counterpart Provenance

This Markdown preserves the exact substantive content of the founder-authorized V2.1 source with raw SHA-256 af34895d8248f0fa26f7c976c345caa7ac9fba7b7bf4f597d32bfb68e0797d20. Only lifecycle document-control metadata differs. The DOCX is a founder-authorized deterministic format counterpart and is not represented as a recovered historical original.

1. Constitutional Purpose

This document establishes the controlling EquineSync constitutional model for agreements, consent, authorization, signatures, acknowledgments, approvals, notices, amendments, renewals, suspensions, terminations, derived operational effects, and evidentiary continuity.

It exists so EquineSync can reliably answer:

1. What agreement, consent, authorization, disclosure, acknowledgment, approval, or notice exists?
2. Which agreement family, package, template, version, clause set, exhibit, and language controlled?

3. Who were the parties, subjects, beneficiaries, obligors, obligees, signers, and approving actors?
4. In what capacity did each person act?
5. What authority supported each represented action?
6. What exact material was presented to each recipient?
7. What did each person agree to, consent to, authorize, acknowledge, approve, refuse, or withdraw?
8. What conditions had to occur before the instrument became effective?
9. When did each term, permission, obligation, restriction, or benefit become effective?
10. Was the action conditional, partial, purpose-limited, revocable, renewable, time-limited, or subject to countersignature?
11. What authentication, identity, signature, delivery, and authority evidence supports it?
12. What notice was required, delivered, received, failed, waived, or disputed?
13. Has the agreement been negotiated, amended, renewed, suspended, superseded, challenged, rescinded, or terminated?
14. What operational effects may EquineSync derive from it under approved rules?
15. Which rights, obligations, permissions, restrictions, and survival terms remain active?
16. What records must remain preserved after transfer, closure, death, dispute, vendor failure, account termination, or system migration?

This model prevents EquineSync from collapsing distinct legal and operational concepts into one overloaded `signed_document` object.

A signature is not the agreement. An agreement is not the rendered PDF. A document is not necessarily a contract. Consent is not always contractual assent. Acknowledgment is not consent. Authorization is not ownership. Approval is not signature. Acceptance is not always execution. Execution is not always effectiveness. A template is not an agreement instance. A clause is not the entire agreement. A checkbox is not always sufficient evidence. A delivery event is not necessarily legal notice. A guardian signature is not the minor's own assent. A business representative is not automatically an authorized signatory. A signature-provider certificate is evidence of an event, not proof of legal capacity. An expired agreement does not erase historical obligations. A terminated agreement does not erase prior performance. A replacement agreement does not silently rewrite the past. A consent withdrawal does not retroactively erase completed lawful actions.

These distinctions are constitutional.

2. Constitutional Position in the EquineSync Canon

This document operates beneath and must remain consistent with:

1. MASTER_PRODUCT_VISION_V2_1
2. MASTER_ECOSYSTEM_MODEL_V2_1
3. MASTER_IDENTITY_ACCOUNT_AND_ACTOR_MODEL_V2_0
4. MASTER_RELATIONSHIP_MODEL_V2_0
5. MASTER_RECORD_STEWARDSHIP_AND_RETENTION_MODEL_V2_1
6. MASTER_CLAIMS_DISPUTES_AND_AUTHORITY_MODEL_V2_0
7. MASTER_PERMISSION_MODEL_V1_1

13. MASTER_PRIVACY_AND_DATA_PROTECTION_MODEL_V2_0
14. MASTER_COMMUNICATION_NOTIFICATION_AND_NOTICE_MODEL_V2_0
15. applicable RF-specific locked canon

2.1 Consent and Authorization Ownership Boundary

This model owns:

- consent and authorization creation;
- presentation, capacity, granularity, and separation;
- acceptance, signature, acknowledgment, and authority evidence;
- consent receipts;
- withdrawal, revocation, expiration, renewal, and supersession;
- agreement-derived operational-effect records.

The Master Permission and Access-Control Model owns how a valid, active, scoped consent or authorization is enforced in an access decision.

The Master Privacy and Data Protection Model owns whether consent is an appropriate or required basis for personal-data processing and owns privacy rights, transparency, and data-subject requests.

The Master Communication, Notification, and Notice Model owns channel-specific communication consent and notice delivery. The Master Media, Files, and Digital Asset Governance Model owns asset-specific capture, use, licensing, and publication rights.

No lower-order system may create a second consent lifecycle, infer consent from silence, or broaden authorization beyond this model.

Where a lower-order domain document conflicts with this model, this model controls unless a later constitutional amendment expressly states otherwise.

This model does not itself determine:

- legal enforceability in a specific jurisdiction;
- whether a person has legal capacity under local law;
- whether a waiver, release, indemnity, liquidated-damages clause, arbitration clause, or limitation of liability is enforceable;
- whether an electronic signature satisfies a specific statutory requirement;
- whether a party breached an agreement;
- whether a contractual remedy is available;
- whether a court or regulator would enforce a provision;
- whether a clause is appropriate for a particular customer or transaction.

Those questions require jurisdiction-aware legal review. This model supplies the canonical platform structure necessary to preserve and operationalize agreement truth responsibly.

3. Scope

This canon governs:

- contracts;
- master agreements;
- order forms;
- statements of work;
- schedules;
- riders;
- addenda;
- waivers;
- releases;
- consents;
- acknowledgments;
- authorizations;
- approvals;
- attestations;
- declarations;
- certifications;
- policy acceptances;
- disclosures;
- notices;
- instructions;
- elections;
- emergency medical authorizations;
- horse-care authorizations;
- payment authorizations;
- boarding agreements;
- training agreements;
- lesson agreements;
- participation agreements;
- equine activity risk disclosures;
- photo and media releases;
- provider agreements;
- employment and contractor documents;
- volunteer agreements;
- facility-use agreements;
- haul-in agreements;
- transportation authorizations;
- horse sale, lease, trial, adoption, custody, and transfer agreements;

- data-sharing consents;
- communication consents;
- privacy consents;
- minor participation consents;
- guardian approvals;
- organization approvals;
- recurring-payment authorities;
- amendments;
- redlines;
- renewals;
- extensions;
- suspensions;
- terminations;
- rescissions;
- withdrawals;
- revocations;
- supersession;
- partial execution;
- countersignature;
- refusal;
- dispute;
- default;
- cure;
- replacement;
- archival preservation;
- electronic-signature evidence;
- paper and wet-signature evidence;
- document-provider integrations;
- agreement-derived permissions, relationships, obligations, and workflow effects.

4. Constitutional Principles

4.1 Agreement truth is distinct from document presentation

An agreement is a governed legal and operational record composed of:

- agreement identity;
- agreement family;
- agreement type;
- parties and non-party subjects;
- capacities;
- authority evidence;

- terms;
- clauses;
- exhibits;
- version;
- presentation package;
- signature and acceptance evidence;
- effective period;
- conditions;
- obligations;
- rights;
- restrictions;
- permissions;
- notices;
- amendments;
- termination and survival rules;
- audit history.

A PDF, image, envelope, or HTML page is a rendering or evidence artifact. It is not the complete canonical agreement model.

4.2 Consent, acknowledgment, authorization, approval, and assent are distinct

EquineSync must distinguish:

- contractual assent;
- informed consent;
- operational authorization;
- instruction;
- election;
- policy acknowledgment;
- risk acknowledgment;
- disclosure receipt;
- permission;
- approval;
- attestation;
- certification;
- refusal;
- revocation;
- withdrawal.

No user interface, event, database field, or report may use these concepts interchangeably.

4.3 Authority must be evaluated at the moment of action

The system must determine whether the actor possessed sufficient authority when the action occurred.

Authority must not be inferred solely from:

- account ownership;
- organization membership;
- role title;
- email domain;
- payment history;
- horse custody;
- possession of a document;
- receipt of an invitation;
- prior authority;
- relationship status;
- administrative access;
- property ownership;
- business ownership.

4.4 Capacity must be explicit

A person may act:

- individually;
- as guardian;
- as parent;
- as authorized representative;
- as organization signatory;
- as horse owner;
- as custodian;
- as barn operator;
- as trainer;
- as payer;
- as guarantor;
- as fiduciary;
- as executor;
- as trustee;
- as agent;
- as attorney-in-fact;
- as service provider;
- as witness;
- as notary where supported;
- as internal approver.

The same person may act in different capacities in different instruments.

4.5 Exact version and presentation context must be preserved

The exact material presented to each party must be reconstructable.

The system must preserve:

- template version;
- generated instance version;
- clause versions;
- variables;
- attachments;
- exhibits;
- schedules;
- disclosures;
- incorporated documents;
- language version;
- rendering hash;
- package manifest;
- signature-time version;
- acceptance language;
- presentation method;
- material-change markers.

4.6 Agreement status and effect are temporal

Agreement truth changes over time.

The system must preserve:

- draft;
- negotiation;
- approval;
- issuance;
- presentation;
- viewing;
- partial execution;
- full execution;
- effectiveness;
- suspension;
- amendment;
- renewal;
- default;
- cure;
- expiration;
- termination;

- rescission;
- revocation;
- supersession;
- dispute;
- archival.

Historical states must remain queryable.

4.7 Execution does not automatically create every possible effect

Even a fully executed instrument may not automatically:

- create legal ownership;
- grant every permission;
- activate a workflow;
- authorize payment changes outside its scope;
- authorize treatment beyond its stated limits;
- override a court order;
- override mandatory law;
- override a higher-order agreement;
- erase prior rights;
- authorize production behavior not approved by governance.

4.8 Refusal, withdrawal, revocation, and nonresponse are separate

EquineSync must distinguish when a party:

- refuses;
- declines;
- withdraws consent;
- revokes authorization;
- disputes capacity;
- disputes signature;
- requests correction;
- challenges version;
- fails to respond;
- fails to receive;
- abandons the process;
- allows an invitation to expire.

4.9 Agreements survive account and relationship changes

Agreement evidence must remain intact after:

- account closure;
- organization departure;
- horse transfer;

- barn transfer;
- death;
- incapacity;
- business closure;
- identity merge;
- system migration;
- signature-vendor change;
- dispute;
- termination.

4.10 External signature and document providers are adapters

External providers may:

- render;
- deliver;
- collect signatures;
- collect initials;
- track recipient activity;
- produce certificates;
- return webhook events;
- store provider copies.

They must not become the canonical authority for:

- party identity;
- capacity;
- authority;
- agreement meaning;
- contract hierarchy;
- operational effect;
- retention;
- dispute resolution;
- canonical status.

4.11 Material terms require meaningful presentation

Material terms must not be obscured through:

- hidden links;
- inaccessible attachments;
- preselected optional consent;
- misleading buttons;
- bundled unrelated permissions;
- false urgency;
- confusing negative consent;

- presentation designed to discourage review.

4.12 Derived effects must be traceable and reversible where appropriate

Any relationship, permission, obligation, schedule, payment authority, access grant, or workflow effect derived from an agreement must remain traceable to:

- the agreement;
- the controlling clause;
- the effective period;
- the relevant party or subject;
- the activation event;
- the revocation, termination, or supersession rule.

5. Canonical Agreement Architecture

text Agreement Family ↓ Template and Clause Library ↓ Negotiation and Approval Lineage ↓ Agreement Instance ↓ Agreement Package Manifest ↓ Parties, Subjects, Capacities, and Authority ↓ Presentation and Notice ↓ Signature / Acceptance / Consent / Authorization Events ↓ Execution State ↓ Conditions to Effectiveness ↓ Effective State ↓ Rights, Obligations, Restrictions, and Permissions ↓ Operational Effect Ledger ↓ Performance, Notice, Default, and Cure ↓ Amendment / Renewal / Suspension / Termination / Supersession ↓ Archival and Evidentiary Continuity

6. Agreement Family and Hierarchy Model

6.1 Agreement family

An Agreement Family groups instruments that collectively govern one relationship or transaction.

Examples:

- master services agreement plus statements of work;
- boarding agreement plus horse-specific schedules;
- lesson agreement plus waiver and minor consent;
- horse lease plus care schedule and insurance exhibit;
- platform terms plus order form and data-processing addendum.

6.2 Instrument hierarchy

A family may contain:

1. master agreement;
2. order form;
3. statement of work;
4. rider;
5. schedule;
6. exhibit;
7. addendum;

8. amendment;
9. policy incorporated by reference;
10. disclosure;
11. consent receipt;
12. termination notice.

6.3 Order of precedence

Where instruments conflict, the family must preserve an explicit order of precedence.

Order of precedence must not be inferred solely from:

- creation date;
- signature date;
- upload order;
- filename;
- document length.

6.4 Incorporation by reference

An incorporated document must be:

- specifically identified;
- versioned;
- available to the recipient;
- included in the package manifest or referenced with stable evidence;
- preserved as presented at execution.

A mutable webpage must not be treated as fixed incorporated terms unless its controlling version is preserved.

7. Core Canonical Entities

7.1 Agreement Template

An Agreement Template is a reusable, version-controlled source for generating agreement instances.

It may include:

- title;
- agreement type;
- agreement family role;
- jurisdiction profile;
- clause library;
- required fields;
- optional clauses;
- exhibits;
- disclosures;
- signature roles;

- approval rules;
- language;
- branding;
- effective-date rules;
- renewal rules;
- notice rules;
- retention classification.

A template is never itself an executed agreement.

7.2 Clause Template

A Clause Template is a version-controlled reusable term.

It must identify:

- clause ID;
- clause type;
- version;
- approved jurisdictions;
- risk level;
- required review level;
- dependencies;
- conflicts;
- optionality;
- replacement rules;
- plain-language summary where approved.

7.3 Agreement Instance

An Agreement Instance is the specific agreement record presented to identified parties.

It must preserve:

- unique agreement ID;
- family ID;
- agreement type;
- source template and version;
- selected clauses and clause versions;
- generated text;
- parties;
- subjects;
- capacities;
- authority snapshots;
- effective dates;
- status;
- related horse;

- related organization;
- related facility;
- related business;
- related service;
- related obligation;
- related transfer;
- related minor;
- related provider;
- governing jurisdiction where applicable.

7.4 Agreement Package

An Agreement Package is the complete set of materials presented together.

It may include:

- controlling agreement;
- exhibits;
- schedules;
- disclosures;
- privacy notice;
- payment authorization;
- risk acknowledgment;
- media consent;
- supplemental instructions;
- signature certificate.

7.5 Package Manifest

The Package Manifest records:

- every included artifact;
- artifact version;
- artifact hash;
- display order;
- required action;
- party visibility;
- language;
- source;
- generation time.

7.6 Party

A Party is a person or organization formally bound, benefited, protected, authorized, or otherwise participating in an agreement.

7.7 Non-Party Subject

A Non-Party Subject is an entity affected by the instrument without necessarily being a legal party.

Examples:

- a horse;
- a minor participant;
- a facility;
- a payment method holder;
- a service provider;
- an emergency contact;
- an insured animal.

7.8 Party Capacity

Party Capacity identifies the role in which a person or organization acts.

7.9 Signer

A Signer is an actor who applies a signature or signature-equivalent event.

A signer may be different from the party represented.

7.10 Consenter

A Consenter grants consent for a defined purpose and scope.

7.11 Authorizer

An Authorizer grants operational authority.

7.12 Acknowledging Party

An Acknowledging Party confirms receipt, awareness, or understanding.

7.13 Approver

An Approver permits a draft, clause, package, exception, or operational effect to proceed.

7.14 Beneficiary

A Beneficiary receives a right, benefit, protection, service, or permission under the agreement.

7.15 Obligor

An Obligor is responsible for performing an obligation.

7.16 Obligee

An Obligee is entitled to performance of an obligation.

7.17 Clause

A Clause is a discrete term or provision.

7.18 Exhibit, Schedule, Rider, and Addendum

These are separately versioned instruments incorporated into or attached to an agreement family.

7.19 Disclosure

A Disclosure presents information that may require receipt, acknowledgment, separate assent, or enhanced presentation.

7.20 Notice

A Notice is a governed communication intended to satisfy an agreement, policy, legal, or operational notice requirement.

7.21 Signature Event

A Signature Event records an electronic or physical signature action.

7.22 Acceptance Event

An Acceptance Event records assent without necessarily applying a formal signature.

7.23 Consent Event

A Consent Event records grant, limitation, refusal, withdrawal, or expiration of consent.

7.24 Authorization Event

An Authorization Event records grant, limitation, suspension, fulfillment, revocation, or expiration of operational authority.

7.25 Acknowledgment Event

An Acknowledgment Event records receipt, awareness, or acknowledgment.

7.26 Obligation

An Obligation is a required act, payment, delivery, restriction, or continuing duty.

7.27 Right or Benefit

A Right or Benefit is an entitlement created or recognized by an agreement.

7.28 Restriction or Prohibition

A Restriction limits conduct, access, disclosure, or use.

7.29 Condition

A Condition is an event that controls effectiveness, performance, continuation, or termination.

7.30 Amendment

An Amendment changes an existing agreement while preserving the original.

7.31 Renewal

A Renewal extends or re-establishes effect for a new period.

7.32 Termination

A Termination ends some or all future effect.

7.33 Rescission

Rescission is a governed action intended to unwind or cancel an agreement, subject to legal and operational review.

7.34 Supersession

Supersession identifies that a later instrument replaces some or all of an earlier instrument.

7.35 Consent Receipt

A Consent Receipt is the canonical evidence package showing what consent was requested, what was presented, what the person chose, and when the choice became effective.

7.36 Authority Snapshot

An Authority Snapshot preserves the authority evidence and evaluation used at the time of signing or approval.

7.37 Operational Effect Ledger

The Operational Effect Ledger records every system effect activated, modified, suspended, or revoked because of an agreement.

8. Legal and Operational Effect Taxonomy

Every material clause should be classified where practical as one or more of:

- representation;
- warranty;
- covenant;
- promise;
- condition precedent;
- condition subsequent;
- obligation;
- payment obligation;
- permission;
- authorization;
- consent;
- acknowledgment;
- disclosure;
- instruction;

- election;
- release;
- waiver;
- assumption of risk;
- limitation;
- restriction;
- prohibition;
- indemnity;
- remedy;
- termination right;
- renewal right;
- survival term;
- notice requirement;
- data-use rule;
- confidentiality rule;
- dispute-process term;
- governing-law term;
- order-of-precedence term.

Classification supports traceability. It does not determine legal enforceability.

9. Agreement Classification

Agreement types should include:

- MASTER_SERVICE_AGREEMENT
- ORDER_FORM
- STATEMENT_OF_WORK
- BOARDING_AGREEMENT
- TRAINING_AGREEMENT
- LESSON_AGREEMENT
- PARTICIPATION_AGREEMENT
- EQUINE_RISK_DISCLOSURE
- LIABILITY_WAIVER
- EMERGENCY_MEDICAL_AUTHORIZATION
- HORSE_MEDICAL_AUTHORIZATION
- HORSE_CARE_AUTHORIZATION
- TRANSPORT_AUTHORIZATION
- PAYMENT_AUTHORIZATION
- RECURRING_PAYMENT_AUTHORIZATION
- PHOTO_VIDEO_RELEASE
- MINOR_CONSENT

- MINOR_ASSENT
- GUARDIAN_AUTHORIZATION
- FACILITY_USE_AGREEMENT
- HAUL_IN_AGREEMENT
- PROVIDER_SERVICE_AGREEMENT
- HORSE_SALE_AGREEMENT
- HORSE_LEASE_AGREEMENT
- HORSE_TRIAL_AGREEMENT
- HORSE_TRANSFER_AGREEMENT
- HORSE_ADOPTION_AGREEMENT
- DATA_SHARING_CONSENT
- COMMUNICATION_CONSENT
- PRIVACY_CONSENT
- POLICY_ACKNOWLEDGMENT
- EMPLOYMENT_AGREEMENT
- CONTRACTOR_AGREEMENT
- VOLUNTEER_AGREEMENT
- CONFIDENTIALITY_AGREEMENT
- DATA_PROCESSING_ADDENDUM
- MARKETPLACE_PROVIDER_AGREEMENT
- PLATFORM_TERMS_ACCEPTANCE
- BUSINESS_TO_BUSINESS_AGREEMENT
- CUSTOM_AGREEMENT

10. Consent Classification and Granularity

10.1 Consent types

Consent types may include:

- express consent;
- informed consent;
- guardian consent;
- minor assent;
- medical consent;
- emergency consent;
- communication consent;
- marketing consent;
- data-sharing consent;
- media consent;
- payment consent;
- recurring-payment consent;

- provider-access consent;
- location-sharing consent;
- optional analytics consent where applicable;
- withdrawal of consent;
- refusal of consent.

Any use of implied consent must be specifically reviewed and must not be treated as a general platform shortcut.

10.2 Consent dimensions

Consent must identify:

- purpose;
- subject;
- recipient;
- data or action scope;
- duration;
- jurisdiction;
- required or optional status;
- revocability;
- withdrawal method;
- downstream recipients;
- onward-sharing rule;
- consequences of refusal;
- consequences of withdrawal;
- effective time;
- expiration.

10.3 Bundling rule

Unrelated optional consents must be separately selectable.

Examples that must remain separable:

- boarding service acceptance;
- marketing SMS consent;
- public media release;
- optional data sharing;
- research participation.

10.4 Re-consent

Re-consent may be required when:

- purpose changes;
- recipient changes;
- scope materially expands;

- retention materially changes;
- new high-risk processing begins;
- a minor reaches adulthood;
- the prior consent expires;
- jurisdictional requirements change;
- the agreement is materially amended.

11. Authorization Classification

Authorization types may include:

- emergency treatment authorization;
- routine treatment authorization;
- medication authorization;
- euthanasia decision authority where expressly included and reviewed;
- transport authorization;
- payment authorization;
- recurring payment authorization;
- record-access authorization;
- provider-access authorization;
- communication authorization;
- guardian authorization;
- fiduciary authorization;
- organization signing authorization;
- horse transfer authorization;
- facility access authorization;
- competition-entry authorization;
- media-use authorization;
- data-export authorization;
- document-release authorization.

Authorization must never exceed its express scope.

12. Capacity and Authority Model

12.1 Capacity determination

Before execution, EquineSync should be able to answer:

- Is this person acting for themselves?
- Is this person acting for a minor?
- Is this person acting for a business?
- Is this person acting for an estate or trust?
- Is this person acting for a horse owner?

- Is this person acting under delegated authority?
- Is this person acting as payer or guarantor?
- Is this person authorized to bind the represented party?
- Is this person authorized for this agreement type and value?

12.2 Authority evidence

Authority evidence may include:

- organization resolution;
- operating agreement;
- delegated authority record;
- guardian documentation;
- court order;
- power of attorney;
- executor appointment;
- trustee certification;
- employment authorization;
- prior agreement;
- approved role plus separate authority confirmation;
- owner instruction;
- written delegation;
- platform authority record.

12.3 Authority limits

Authority may be limited by:

- agreement type;
- monetary threshold;
- horse;
- facility;
- organization;
- business unit;
- time;
- jurisdiction;
- action type;
- payment method;
- medical scope;
- provider;
- purpose;
- approval requirement;
- countersignature requirement.

12.4 Authority snapshot

Every high-impact execution should preserve an authority snapshot containing:

- signer identity;
- represented principal;
- capacity;
- source evidence;
- verification state;
- scope;
- limitations;
- effective period;
- approving reviewer where required;
- dispute state.

12.5 No silent authority inheritance

Authority must not silently transfer because:

- ownership changes;
- employment changes;
- account access changes;
- a person becomes administrator;
- a horse moves barns;
- a minor reaches adulthood;
- a business changes name;
- a family member inherits property;
- a prior signatory leaves the organization.

13. Party, Subject, Beneficiary, and Responsibility Separation

EquineSync must distinguish:

- party;
- signer;
- represented party;
- subject;
- beneficiary;
- responsible party;
- payer;
- guarantor;
- payment-method holder;
- horse owner;
- horse custodian;
- guardian;

- emergency decision-maker;
- provider;
- witness;
- approver.

Examples:

- a parent may sign as guardian while another person pays;
- a barn may provide services while the trainer is a separate party;
- the horse is a subject but not a human signer;
- an LLC may be the party while an owner signs as representative;
- a guarantor may owe payment without receiving services.

14. Minor and Guardian Agreements

14.1 Separate identities

The minor and guardian remain separate identities and agreement participants.

14.2 Guardian signature

A guardian signature must identify:

- guardian identity;
- minor identity;
- authority basis;
- scope;
- agreement version;
- signing capacity;
- effective period;
- restrictions;
- dispute state.

14.3 Minor assent

Where appropriate, EquineSync may separately collect minor assent.

Minor assent must not be misrepresented as legal consent where guardian authorization is required.

14.4 Multiple guardians

The platform must support:

- one required guardian;
- multiple required guardians;
- either guardian may sign;
- both guardians must sign;
- different scopes;
- temporary authority;

- disputed authority;
- court-ordered restrictions;
- one guardian receiving notice while another controls consent.

14.5 Safe communication and participation boundaries

Minor agreements may trigger:

- guardian-copy requirements;
- direct-message restrictions;
- transportation restrictions;
- photo and media limitations;
- emergency-contact rules;
- participation eligibility rules.

14.6 Transition to adulthood

When a minor reaches the age of majority:

- guardian authority must be reevaluated;
- ongoing consents may require reauthorization;
- prior agreements remain historically preserved;
- the now-adult participant may need replacement or ratification documents;
- communication rights must transition;
- privacy and record-access rights must be reassessed;
- payment responsibility must not be silently transferred.

15. Organization Agreements

An organization agreement must preserve:

- organization identity;
- signer identity;
- signer capacity;
- authority evidence;
- approval rules;
- organization role;
- agreement type;
- monetary or operational scope;
- effective period;
- organization status;
- countersignature requirements.

An organization administrator is not automatically an authorized signatory.

15.1 Multi-entity agreements

The system must support agreements involving separate:

- property owner;
- facility operator;
- boarding business;
- training business;
- service provider;
- customer;
- guarantor;
- payment recipient.

These entities must not be flattened into one barn identity.

16. Fiduciary, Estate, Trust, and Incapacity Agreements

Where a party is an estate, trust, deceased person, or incapacitated person, the platform must preserve:

- represented identity;
- fiduciary identity;
- fiduciary role;
- authority evidence;
- effective period;
- jurisdiction;
- limitations;
- court or document reference;
- expiration;
- dispute state;
- successor process.

Possession of the represented person's account is never sufficient authority.

17. Agreement Drafting, Negotiation, and Approval Lineage

17.1 Draft lineage

Every draft should preserve:

- source template;
- creator;
- creation time;
- edits;
- clause changes;
- redlines;
- comments;
- approvers;
- approval state;
- rejected changes;

- finalization event.

17.2 Negotiation state

Negotiated agreements may include:

- proposed;
- counterproposed;
- redlined;
- under legal review;
- under business review;
- approved with exception;
- rejected;
- finalized.

17.3 Clause deviation control

Material deviations from approved templates should trigger:

- risk classification;
- legal review where required;
- business approval;
- exception record;
- version lock;
- audit.

17.4 AI drafting boundary

AI may assist with:

- clause comparison;
- issue spotting;
- summaries;
- variable population;
- drafting suggestions;
- inconsistency detection.

AI must not independently:

- approve legal terms;
- choose governing law;
- determine enforceability;
- execute an agreement;
- represent a party;
- silently alter approved language;
- create production templates without review.

18. Agreement Versioning and Immutability

18.1 Template version

Every template must have:

- unique version;
- effective date;
- status;
- change summary;
- approving authority;
- approved jurisdictions;
- superseded version reference.

18.2 Clause version

Every reusable clause must have independent version history.

18.3 Instance version

Every generated instance must preserve:

- template version;
- selected clause versions;
- populated variables;
- exhibits;
- attachments;
- disclosures;
- rendering hash;
- generation time;
- generating actor;
- language;
- package manifest.

18.4 Signature-time version

The exact version presented for each signature or acceptance must be immutable.

18.5 Post-execution correction

Substantive post-execution changes require:

- amendment;
- correction agreement;
- re-execution;
- rescission and replacement;
- dispute resolution.

Administrative metadata correction may occur only when it does not alter terms, parties, capacity, authority, dates, or effect.

19. Presentation Package and Consent Receipt

19.1 Presentation record

The platform must preserve:

- recipient;
- delivery channel;
- package manifest;
- display order;
- language;
- accessibility mode where known;
- acceptance wording;
- timestamp;
- viewed state;
- download availability;
- material-term emphasis;
- failure state.

19.2 Consent receipt

A consent receipt should include:

- consent ID;
- consenter;
- subject;
- purpose;
- recipient;
- scope;
- exact language;
- version;
- grant or refusal;
- effective time;
- expiration;
- withdrawal process;
- evidence;
- downstream effect references.

19.3 No false proof of reading

A view event or scroll event may show presentation activity, but must not be described as proof that the person read or understood every term.

20. Electronic Contracting Patterns

Supported patterns may include:

- provider-based electronic signature;
- clickwrap;
- sign-in wrap;
- scroll-assisted acceptance;
- typed signature;
- drawn signature;
- one-time-code confirmation;
- authenticated acceptance;
- in-person digital signature;
- uploaded wet signature;
- witnessed signature;
- notarized evidence where supported;
- administrative memorialization of verbal consent where legally permitted and specifically approved.

Passive browwrap-style presentation must not be treated as a default high-assurance agreement method.

The approved method depends on:

- agreement type;
- risk;
- jurisdiction;
- party;
- capacity;
- identity confidence;
- materiality;
- legal review;
- organization policy.

21. Signature and Acceptance Assurance Profiles

Assurance profiles may include:

- BASIC_AUTHENTICATED_ACCEPTANCE
- MFA_ACCEPTANCE
- PROVIDER_CERTIFIED_SIGNATURE
- IDENTITY_VERIFIED_SIGNATURE
- GUARDIAN_VERIFIED_SIGNATURE
- ORGANIZATION_AUTHORITY_VERIFIED_SIGNATURE
- WITNESSED_SIGNATURE
- NOTARIZED_SIGNATURE
- WET_SIGNATURE_VERIFIED_COPY

High-risk instruments may require:

- verified account;
- MFA;
- step-up authentication;
- identity verification;
- guardian verification;
- organization-authority verification;
- separate initials;
- witness;
- countersignature;
- provider certificate;
- in-person verification where justified.

The assurance level used must be preserved.

22. Agreement Lifecycle State Machine

text DRAFT ↓ NEGOTIATION ↓ INTERNAL_REVIEW ↓ APPROVED_FOR_USE ↓ GENERATED ↓ ISSUED ↓ PRESENTED ↓ VIEWED ↓ PARTIALLY_EXECUTED ↓ FULLY_EXECUTED ↓ PENDING_CONDITION ↓ EFFECTIVE ↓ ACTIVE_PERFORMANCE ↓ AMENDED / RENEWED / SUSPENDED / IN_DEFAULT ↓ CURED / REINSTATED / EXPIRED / TERMINATED / RESCINDED / SUPERSEDED ↓ ARCHIVED

Additional states may include:

- DECLINED
- VOID
- CANCELLED
- DISPUTED
- PENDING_COUNTERSIGNATURE
- PENDING_APPROVAL
- PENDING_VERIFICATION
- FAILED_DELIVERY
- WITHDRAWN_BEFORE_EXECUTION

Each transition must define:

- eligible actor;
- required evidence;
- required approval;
- notice;
- audit;
- operational effect;
- rollback or correction path;
- downstream effect handling.

23. Consent Lifecycle State Machine

text REQUESTED ↓ PRESENTED ↓ GRANTED / REFUSED ↓ ACTIVE ↓ LIMITED / SUSPENDED ↓ WITHDRAWN / EXPIRED / REVOKED / SUPERSEDED ↓ ARCHIVED

Consent withdrawal must preserve:

- withdrawing actor;
- capacity;
- effective time;
- scope;
- downstream systems notified;
- completed actions;
- irreversible effects;
- surviving obligations;
- evidence.

24. Authorization Lifecycle State Machine

text PROPOSED ↓ APPROVED ↓ ACTIVE ↓ LIMITED / SUSPENDED ↓ REVOKED / EXPIRED / FULFILLED / SUPERSEDED ↓ ARCHIVED

25. Obligation Lifecycle State Machine

text PROPOSED ↓ CREATED ↓ NOT_YET_DUE ↓ DUE ↓ PARTIALLY_PERFORMED / PERFORMED ↓ DISPUTED / WAIVED / EXCUSED / IN_DEFAULT ↓ CURED / SATISFIED / TERMINATED ↓ ARCHIVED

An obligation state must not be inferred solely from agreement status.

26. Partial Execution and Countersignature

The system must preserve:

- required signers;
- signature roles;
- signature order;
- completed signatures;
- missing signatures;
- countersignature requirement;
- partial-effect rules;
- pending-signature expiration;
- cancellation rules;
- package changes after partial signature.

If the package changes after one party signs, the system must determine whether prior signatures remain valid, require reaffirmation, or become void under the configured rule.

27. Conditions Precedent and Conditions Subsequent

An agreement may become effective only after:

- all signatures;
- countersignature;
- deposit payment;
- insurance proof;
- health documentation;
- guardian approval;
- facility approval;
- horse acceptance;
- background review;
- start date;
- required disclosure delivery;
- another agreement becoming effective.

Continuation may depend on later conditions such as:

- insurance remaining active;
- licenses remaining valid;
- payment remaining current;
- health documents remaining current;
- membership remaining active.

Conditions must be explicit, auditable, and linked to their evidence.

28. Rights, Benefits, Obligations, and Restrictions

Each material effect should identify:

- effect type;
- source agreement;
- source clause;
- responsible party;
- benefited party;
- subject;
- scope;
- start;
- end;
- condition;
- performance state;
- dispute state;
- survival rule;
- downstream system effects.

Examples:

- payment duty;
- stall assignment right;
- training service entitlement;
- emergency treatment authority;
- confidentiality restriction;
- facility-access permission;
- cancellation right;
- record-delivery duty;
- notice obligation.

29. Operational Effect Ledger

No agreement-derived system effect should exist without a ledger entry.

The ledger must record:

- effect ID;
- agreement ID;
- clause ID;
- effect type;
- target domain;
- affected identity, horse, organization, or facility;
- activation event;
- effective time;
- expiration;
- suspension state;
- revocation state;
- terminating event;
- originating actor;
- approval state;
- audit reference.

Examples of target domains:

- permissions;
- relationships;
- payments;
- scheduling;
- communications;
- horse care;
- provider access;
- document delivery;
- facility access;

- transfer continuity.

30. Agreement-Derived Permissions

Permissions derived from agreements must:

- remain scoped;
- remain time-bound;
- be evaluated with current identity and authority;
- change when the source agreement changes;
- terminate or suspend when required;
- not exceed the source clause;
- not override higher-order permission rules;
- remain traceable to the source agreement;
- support manual review when the agreement is disputed.

31. Agreement-Derived Relationships

An agreement may evidence or create a relationship proposal, but relationship activation must follow the Relationship Model.

Examples:

- horse-owner relationship;
- horse-custodian relationship;
- trainer-client relationship;
- provider-horse relationship;
- guardian-minor relationship;
- business-facility operator relationship.

The agreement must not silently become the sole relationship record.

32. Agreement-Derived Financial Obligations

Financial obligations must preserve:

- responsible party;
- payer;
- payee;
- guarantor;
- amount or formula;
- due date;
- recurring status;
- deposit rules;
- fee rules;
- tax treatment reference;

- late-fee terms;
- refund terms;
- cancellation terms;
- source clause;
- amendment history;
- survival after termination.

Agreement execution does not prove payment, settlement, or collection.

33. Notice Model

33.1 Notice as a distinct object

Notice must be modeled separately from ordinary communication.

A notice record should include:

- notice type;
- sender;
- recipient;
- represented parties;
- agreement and clause;
- required method;
- actual method;
- sent time;
- delivered time;
- failed time;
- deemed-received time where configured;
- content version;
- attachments;
- evidence;
- response deadline;
- dispute state.

33.2 Delivery versus legal effect

EquineSync must distinguish:

- message created;
- message sent;
- provider accepted;
- delivered;
- opened;
- acknowledged;
- legally deemed received under configured terms;
- failed;

- bounced;
- refused.

33.3 Notice methods

Methods may include:

- in-app notice;
- email;
- SMS;
- certified mail;
- ordinary mail;
- personal delivery;
- courier;
- signature-provider delivery;
- documented verbal notice where permitted;
- another contractually specified method.

33.4 Notice windows

The system should support:

- notice deadlines;
- cure periods;
- renewal windows;
- cancellation windows;
- response deadlines;
- business-day rules;
- timezone and jurisdiction rules.

34. Presentation and Informed Choice

Agreement presentation must support:

- readable formatting;
- accessible design;
- mobile readability;
- clear party identification;
- clear effective date;
- separate high-risk clauses;
- clear revocation rules;
- clear consent scope;
- meaningful review opportunity;
- downloadable copy;
- language access where available;
- disclosure of incorporated documents;

- notice of material changes;
- clear action labels;
- clear consequences of refusal where appropriate.

Dark patterns are prohibited.

A plain-language summary may assist comprehension, but it must not replace the controlling text.

35. Amendment, Addendum, and Change Control

An amendment must identify:

- original agreement;
- affected provisions;
- prior text;
- new text;
- effective date;
- required parties;
- required approvals;
- superseded text;
- preserved text;
- downstream effects.

An addendum must identify whether it:

- supplements;
- modifies;
- clarifies;
- overrides;
- expires separately;
- applies to one horse, person, facility, service, or transaction.

Material changes require renewed assent where appropriate.

36. Renewal, Extension, Evergreen Terms, and Re-Consent

Renewal may be:

- automatic;
- manual;
- periodic;
- conditional;
- month-to-month;
- fixed-term;
- evergreen subject to notice.

The system must preserve:

- renewal notice;

- notice window;
- renewal terms;
- changed terms;
- material-change flag;
- assent requirement;
- effective period;
- opt-out method;
- payment effect;
- prior version;
- renewal actor.

Materially changed terms must not be treated as unchanged automatic renewal.

37. Performance, Default, Cure, Waiver, and Excuse

37.1 Performance tracking

Performance records may include:

- obligation performed;
- partial performance;
- missed performance;
- accepted substitute performance;
- disputed performance;
- excused performance;
- waived performance.

37.2 Default

A default record must identify:

- default type;
- source clause;
- responsible party;
- alleged event;
- evidence;
- notice requirement;
- cure right;
- cure deadline;
- dispute state;
- effect on services, access, or payments.

37.3 Cure

A cure must be linked to the default and must not silently delete the original event.

37.4 Waiver

A waiver of one default or requirement must not be treated as a blanket waiver unless expressly stated.

37.5 Force majeure and excuse

Where applicable, force-majeure or excuse claims must be represented as claims requiring review, not automatically accepted system states.

38. Suspension

Agreement effect may be suspended because of:

- nonpayment;
- safety issue;
- dispute;
- missing documentation;
- insurance lapse;
- account security issue;
- horse health issue;
- facility closure;
- legal restriction;
- emergency;
- loss of professional credential.

Suspension must identify:

- scope;
- start;
- reason;
- actor;
- authority;
- notice;
- conditions for reinstatement;
- obligations that survive;
- derived effects suspended;
- dispute rights.

39. Termination

Termination must preserve:

- terminating party;
- capacity and authority;
- reason;
- source clause;
- notice method;

- notice time;
- effective date;
- cure history;
- surviving obligations;
- refund or payment treatment;
- transition duties;
- horse custody implications;
- property-return duties;
- data and record access;
- permission revocation;
- related agreements affected.

Termination must not erase prior performance or evidence.

40. Rescission, Void, Voidable, and Cancellation States

EquineSync may represent claims or decisions that an agreement is:

- cancelled before execution;
- voided administratively before effectiveness;
- alleged void;
- alleged voidable;
- rescinded;
- replaced;
- disputed.

The platform must not independently make legal conclusions about voidness or rescission without an authorized decision source.

41. Revocation and Withdrawal

Consent or authorization revocation must identify:

- revoking actor;
- capacity;
- source authority;
- scope;
- effective time;
- downstream impact;
- irreversible actions already taken;
- surviving obligations;
- notice recipients;
- record-retention rule;
- disputed effects.

42. Supersession, Conflict, and Order of Precedence

When multiple instruments apply, EquineSync must determine under configured rules:

- whether one supersedes another;
- whether provisions coexist;
- whether one controls a narrower subject;
- whether an addendum overrides a clause;
- whether an order form overrides a master term;
- whether a later agreement replaces the earlier agreement;
- whether a court order or mandatory rule controls;
- whether a conflict requires human review.

Supersession must never be inferred solely from date.

43. Emergency Medical and Horse Care Authorizations

Emergency authorization must identify:

- horse;
- authorizing party;
- authority basis;
- emergency decision-maker;
- alternate decision-maker;
- veterinarian or provider scope;
- spending cap;
- treatment limits;
- medication limits;
- transport authority;
- diagnostic authority;
- surgical authority where included;
- euthanasia authority where expressly included and reviewed;
- contact order;
- effective period;
- revocation;
- jurisdictional limitations.

High-risk provisions should require enhanced presentation, separate acknowledgment, and appropriate assurance.

44. Equine Activity Risk Disclosures, Releases, and Waivers

These instruments must preserve:

- jurisdiction;
- statutory language where used;

- participant;
- minor;
- guardian;
- facility;
- activity;
- risk disclosure;
- assumption-of-risk language;
- release scope;
- exclusions;
- signature method;
- version;
- date;
- presentation evidence;
- separate assent where required.

EquineSync must not state that a waiver is legally valid merely because it was signed.

45. Boarding, Training, Lesson, and Participation Agreements

These agreements may govern separate subjects including:

- services;
- fees;
- horse care;
- facility rules;
- training authority;
- lesson participation;
- cancellation;
- scheduling;
- tack and equipment;
- emergency action;
- veterinary coordination;
- farrier coordination;
- transport;
- media;
- communication;
- minor safety;
- property storage;
- termination;
- horse removal;
- record continuity.

The platform must support separate entities where the facility operator, trainer, property owner, and payment recipient differ.

46. Horse Sale, Lease, Trial, Adoption, and Transfer Agreements

Transfer-related instruments must distinguish:

- legal ownership claim;
- custody;
- possession;
- care responsibility;
- risk of loss;
- insurance responsibility;
- payment obligations;
- trial period;
- return conditions;
- restrictions;
- disclosures;
- veterinary examination rights;
- passport and record continuity;
- effective transfer event;
- failed transfer;
- rollback or return;
- unresolved claims.

Agreement execution must not automatically mark ownership transferred unless the required transfer conditions and authority rules are satisfied.

47. Photo, Video, and Media Consent

Media consent should distinguish:

- capture;
- internal use;
- client delivery;
- educational use;
- social media;
- marketing;
- paid advertising;
- press use;
- horse-only use;
- person-name use;
- minor use;
- duration;
- geographic scope;
- platform scope;
- third-party sharing;

- compensation;
- revocation;
- preexisting publications.

Optional media consent must remain separate from required service terms.

48. Communication Consent and Notice Preferences

Communication consent must distinguish:

- operational messages;
- emergency messages;
- transactional messages;
- legal or contract notices;
- marketing messages;
- SMS;
- email;
- push notifications;
- direct messages;
- minor communications;
- guardian-copy requirements;
- opt-out rights.

A marketing opt-out must not disable legally or operationally required notices where another valid basis permits delivery.

49. Payment Authorization

Payment authorization must identify:

- payer;
- payment-method holder;
- responsible party;
- guarantor;
- merchant or recipient;
- one-time or recurring authority;
- amount or formula;
- frequency;
- variable-amount rules;
- maximum amount where applicable;
- start;
- end;
- notice before charge where required;
- cancellation;
- failed-payment treatment;

- processor;
- authorization evidence;
- tokenized payment reference rather than raw sensitive data where appropriate.

Entering payment details does not prove legal responsibility.

50. Data Sharing, Privacy, and Confidentiality Instruments

Data-sharing consent must identify:

- data categories;
- recipient;
- purpose;
- duration;
- revocation;
- legal basis reference;
- onward sharing;
- cross-border transfer where applicable;
- minor status;
- professional-record restrictions;
- required versus optional sharing;
- security expectations;
- retention expectations.

Consent must not be used as a universal substitute where another lawful basis or contractual basis applies.

Confidentiality obligations must identify:

- protected information;
- exclusions;
- permitted recipients;
- purpose;
- duration;
- return or destruction rules;
- legal-compulsion process;
- survival.

51. Refusal, Decline, Nonresponse, and Failed Delivery

The platform must support:

- declined agreement;
- refused consent;
- refusal reason where voluntarily provided;
- expired invitation;
- abandoned signature flow;
- failed identity verification;

- authority rejected;
- version challenged;
- failed delivery;
- bounced email;
- undeliverable SMS;
- recipient nonresponse;
- withdrawal before execution.

Refusal, failed delivery, and nonresponse must not be conflated.

52. Disputed Agreements, Signatures, Authority, and Effect

Disputes may concern:

- identity;
- account control;
- authority;
- capacity;
- signature authenticity;
- version;
- coercion;
- mistake;
- fraud;
- unauthorized amendment;
- effective date;
- scope;
- payment authority;
- revocation;
- termination;
- notice;
- derived permission;
- alleged default.

When disputed, EquineSync may:

- preserve all evidence;
- restrict derived permissions;
- freeze high-risk actions;
- preserve audit logs;
- notify affected parties;
- open a claim;
- require review;
- avoid destructive changes;
- maintain neutral status labels until resolved.

53. Correction Rules

Administrative corrections may fix:

- typographical display errors;
- address formatting;
- internal indexing;
- non-substantive metadata;
- duplicate attachment labels.

Substantive corrections require:

- amendment;
- correction agreement;
- re-execution;
- rescission and replacement;
- dispute resolution.

Executed terms, party identities, capacities, authority, signatures, and effective dates must not be silently changed.

54. External Signature Provider and Webhook Model

The canonical EquineSync agreement record must preserve:

- provider;
- provider account;
- envelope or transaction ID;
- recipient IDs;
- provider status;
- sent time;
- viewed time;
- signed time;
- completed time;
- declined time;
- voided time;
- provider certificate;
- document hash;
- signer evidence;
- webhook evidence;
- webhook signature verification;
- idempotency key;
- duplicate-event handling;
- reconciliation status;
- provider error state.

Provider outages, delayed webhooks, duplicate webhooks, or provider data loss must not destroy or corrupt canonical state.

55. Offline, Paper, and In-Person Execution

EquineSync should support controlled capture of:

- wet signatures;
- scanned agreements;
- in-person tablet signing;
- witnessed signatures;
- notarized copies where needed;
- verbal consent memorialization where legally permitted;
- offline signature collection;
- later synchronization.

Offline capture must preserve:

- collecting actor;
- signer identity;
- date;
- location where appropriate;
- method;
- witness;
- uploaded evidence;
- verification status;
- sync time;
- conflict review;
- original-custody information where relevant.

56. Internationalization and Jurisdiction Profiles

The model must support:

- governing law;
- venue;
- jurisdiction profile;
- language;
- translation;
- local electronic-signature requirements;
- age of majority;
- guardian standards;
- consumer cancellation rights;
- privacy consent rules;
- equine activity statutes;

- jurisdiction-specific disclosures;
- witness or notary rules;
- cross-border parties;
- currency and tax references;
- business-day definitions.

A translated version must be linked to the controlling version.

No jurisdiction profile may be activated without approved legal review.

57. Accessibility, Comprehension, and Fair Presentation

Agreement presentation should support:

- readable typography;
- screen readers;
- keyboard navigation;
- mobile layout;
- downloadable copy;
- clear headings;
- plain-language summaries where appropriate;
- separation of legal text and explanatory text;
- alternative language versions;
- accessible signature controls;
- enough time to review;
- clear correction paths.

A summary must never replace the controlling agreement text.

58. Security and Abuse Prevention

Agreement workflows must protect against:

- account takeover;
- unauthorized signature;
- session hijacking;
- altered documents;
- replayed signature events;
- webhook spoofing;
- duplicate execution;
- hidden document substitution;
- post-signature file replacement;
- unauthorized template editing;
- support impersonation abuse;
- coercive or deceptive presentation;
- bulk export abuse;

- insecure storage of identity evidence.

High-risk actions should support step-up authentication and administrative review.

59. Record Stewardship, Retention, Legal Hold, and Disposal

Agreement records may include:

- templates;
- clause versions;
- drafts;
- redlines;
- approvals;
- package manifests;
- instances;
- renderings;
- signatures;
- certificates;
- exhibits;
- notices;
- audit;
- authority evidence;
- identity evidence;
- amendments;
- performance records;
- defaults;
- terminations;
- disputes;
- derived effects;
- provider evidence.

Retention must follow:

- record class;
- legal hold;
- agreement type;
- jurisdiction;
- limitation period policy;
- evidentiary need;
- privacy minimization;
- contractual survival.

Disposal must not break referential integrity or historical attribution.

60. Audit and Evidence Requirements

Every consequential agreement event must preserve, as applicable:

- event type;
- agreement ID;
- family ID;
- template version;
- clause versions;
- instance version;
- actor;
- authenticated principal;
- represented principal;
- approving actor;
- party;
- capacity;
- authority snapshot;
- session;
- device;
- provider;
- timestamp;
- effective time;
- document hash;
- package manifest hash;
- prior state;
- new state;
- reason;
- notice;
- IP or network data where appropriate;
- dispute state;
- AI involvement;
- support involvement;
- external-system reference.

Evidence must support reconstruction without depending exclusively on the external provider.

61. Evidence Hierarchy

Evidence may include:

1. canonical agreement instance;
2. immutable signature-time rendering;
3. package manifest;
4. signature or acceptance event;

5. authority snapshot;
6. authentication assurance evidence;
7. provider certificate;
8. verified webhook records;
9. delivery and notice records;
10. device and session metadata;
11. witness or notary evidence;
12. uploaded paper copy;
13. contemporaneous staff memorialization;
14. later testimony or claim.

This hierarchy guides evidentiary completeness. It does not decide legal admissibility.

62. Canonical Agreement Events

62.1 Template and clause events

- AgreementTemplateCreated
- AgreementTemplateRevised
- AgreementTemplateApproved
- AgreementTemplateRetired
- AgreementTemplateSuperseded
- ClauseCreated
- ClauseRevised
- ClauseApproved
- ClauseExceptionApproved
- ClauseRetired

62.2 Draft and negotiation events

- AgreementDraftCreated
- AgreementDraftRevised
- AgreementRedlineProposed
- AgreementCounterproposalReceived
- AgreementLegalReviewRequested
- AgreementBusinessApprovalRequested
- AgreementExceptionApproved
- AgreementDraftFinalized

62.3 Instance and package events

- AgreementGenerated
- AgreementPackageCreated
- AgreementPackageValidated

- AgreementIssued
- AgreementPresented
- AgreementViewed
- AgreementDownloaded
- AgreementDeliveryFailed
- AgreementDeclined
- AgreementCancelled
- AgreementVoidedBeforeEffectiveness
- AgreementPartiallyExecuted
- AgreementFullyExecuted
- AgreementConditionSatisfied
- AgreementBecameEffective
- AgreementPerformanceStarted
- AgreementSuspended
- AgreementReinstated
- AgreementExpired
- AgreementTerminated
- AgreementRescissionClaimed
- AgreementRescinded
- AgreementSuperseded
- AgreementArchived
- AgreementDisputed
- AgreementDisputeResolved

62.4 Signature and acceptance events

- SignatureRequested
- SignatureApplied
- SignatureRejected
- SignatureFailed
- CountersignatureApplied
- WitnessSignatureApplied
- NotaryEvidenceAttached
- WetSignatureUploaded
- AcceptanceRecorded
- AcceptanceWithdrawnBeforeEffectiveness

62.5 Consent events

- ConsentRequested
- ConsentPresented
- ConsentGranted

- ConsentLimited
- ConsentRefused
- ConsentWithdrawn
- ConsentExpired
- ConsentReconfirmed
- ConsentReceiptIssued

62.6 Authorization events

- AuthorizationGranted
- AuthorizationLimited
- AuthorizationSuspended
- AuthorizationRevoked
- AuthorizationExpired
- AuthorizationFulfilled
- AuthorizationSuperseded

62.7 Amendment and renewal events

- AmendmentProposed
- AmendmentIssued
- AmendmentExecuted
- AddendumExecuted
- RenewalNoticeIssued
- RenewalProposed
- RenewalAccepted
- RenewalDeclined
- AgreementExtended

62.8 Notice, default, and cure events

- NoticeCreated
- NoticeSent
- NoticeDelivered
- NoticeDeliveryFailed
- NoticeAcknowledged
- NoticeDeemedReceived
- DefaultAlleged
- DefaultNoticeIssued
- CurePeriodStarted
- DefaultCured
- DefaultDisputed
- ObligationWaived

62.9 Authority events

- SigningAuthorityVerified
- SigningAuthorityRejected
- SigningAuthorityExpired
- GuardianAuthorityVerified
- GuardianAuthorityDisputed
- FiduciaryAuthorityVerified
- AuthoritySnapshotCaptured

62.10 Derived-effect events

- AgreementEffectProposed
- AgreementEffectActivated
- AgreementEffectSuspended
- AgreementEffectRevoked
- AgreementEffectExpired
- AgreementEffectReconciled

63. Constitutional Invariants

1. Every agreement has a unique canonical identity.
2. Every agreement family has an explicit hierarchy.
3. Every executed agreement preserves the exact signed or accepted version.
4. A signature event does not by itself prove legal authority.
5. Consent, authorization, acknowledgment, approval, and contractual assent remain distinct.
6. Every signer acts in an explicit capacity.
7. Every represented party remains distinct from the signer.
8. Every high-impact signature preserves an authority snapshot.
9. Executed text cannot be silently overwritten.
10. Clause versions remain traceable.
11. Amendments preserve originals.
12. Partial execution is not full execution.
13. Execution is not necessarily effectiveness.
14. Conditions to effectiveness remain explicit.
15. Termination does not erase accrued obligations or history.
16. Consent withdrawal preserves prior completed actions and evidence.
17. Agreement-derived permissions remain traceable to the source clause.
18. Agreement-derived obligations remain traceable to the source clause.
19. Agreement-derived relationships remain subject to the Relationship Model.
20. External signature providers are adapters, not canonical authorities.
21. A guardian signature never merges guardian and minor identities.

22. An organization administrator is not automatically an authorized signatory.
23. A payment-method holder is not automatically the responsible party.
24. A superseding instrument must be explicit.
25. Refusal is a valid and auditable outcome.
26. Failed delivery is not refusal.
27. Nonresponse is not consent.
28. Disputed agreements remain preserved.
29. High-risk authorizations require appropriate assurance.
30. Material changes require appropriate new assent.
31. Optional consent cannot be hidden inside required acceptance.
32. Historical agreement states remain queryable.
33. Agreement records survive account closure, transfer, death, and vendor change.
34. Every operational effect has a ledger entry.
35. A mutable external webpage cannot serve as preserved controlling terms without version evidence.
36. Provider webhooks must be verified, idempotent, and reconcilable.
37. AI cannot independently approve or execute legal instruments.
38. Support cannot sign as the customer.
39. Notice state remains distinct from ordinary message state.
40. No agreement state may be silently rewritten to simplify workflow.

64. Prohibited Patterns

The following are prohibited:

1. Treating a PDF file as the complete agreement model.
2. Overwriting executed agreement text.
3. Treating acknowledgment as consent.
4. Treating consent as contractual assent without context.
5. Treating provider completion as proof of authority.
6. Allowing organization administrators to sign everything by default.
7. Merging minor and guardian signature records.
8. Bundling optional marketing consent into required boarding acceptance.
9. Pre-checking optional consent.
10. Applying broad permissions from narrow agreement language.
11. Inferring horse ownership from signature alone.
12. Treating payment authorization as ownership proof.
13. Treating current account access as historical signing authority.
14. Deleting agreement history when an account closes.
15. Treating expired agreements as if they never existed.
16. Treating termination as erasure.
17. Auto-renewing materially changed terms without proper assent.

18. Silent supersession.
19. Allowing support to sign as the customer.
20. Allowing AI to execute agreements independently.
21. Using one checkbox for unrelated consents.
22. Hiding material clauses in inaccessible attachments.
23. Failing to preserve the version shown to each signer.
24. Treating failed delivery as refusal.
25. Allowing a revoked authorization to remain active.
26. Treating a view event as proof of comprehension.
27. Treating a role title as conclusive signing authority.
28. Creating agreement-derived permissions without source-clause traceability.
29. Accepting unsigned changed terms as though previously signed.
30. Replacing a signed package file without changing its hash and version.
31. Treating a webhook as trusted without verification.
32. Allowing duplicate webhook events to duplicate execution or payment effects.
33. Relying exclusively on a third-party provider for retention.
34. Conflating legal notice with marketing communication.
35. Treating nonresponse as affirmative consent.

65. Minimum Canonical Data Requirements

65.1 Agreement family

- family ID;
- family type;
- instruments;
- order of precedence;
- related parties;
- related subjects;
- status;
- controlling jurisdiction profile.

65.2 Agreement template

- template ID;
- agreement type;
- family role;
- title;
- version;
- status;
- jurisdiction profile;
- language;

- clauses and versions;
- exhibits;
- signature roles;
- approval state;
- effective date;
- retirement date.

65.3 Agreement instance

- agreement ID;
- family ID;
- template ID and version;
- clause versions;
- generated version;
- parties;
- subjects;
- capacities;
- authority snapshots;
- related entities;
- status;
- issue date;
- execution date;
- effective date;
- expiration date;
- governing law reference;
- document hash;
- package manifest hash;
- retention class;
- dispute state.

65.4 Party record

- party ID;
- identity;
- party type;
- capacity;
- represented principal;
- authority source;
- required action;
- completion status;
- notice information.

65.5 Signature event

- signature event ID;
- signer;
- account;
- represented party;
- capacity;
- method;
- assurance profile;
- timestamp;
- session;
- device;
- provider;
- evidence;
- agreement version;
- package manifest hash.

65.6 Consent event

- consent event ID;
- consentor;
- subject;
- recipient;
- purpose;
- scope;
- exact language;
- status;
- effective date;
- expiration;
- revocation terms;
- consent receipt.

65.7 Authorization event

- authorization event ID;
- authorizer;
- authorized actor;
- subject;
- scope;
- limits;
- effective date;
- expiration;
- revocation state;

- authority evidence.

65.8 Obligation record

- obligation ID;
- agreement and clause;
- obligor;
- obligee;
- subject;
- performance description;
- due rule;
- status;
- survival rule;
- dispute state.

65.9 Notice record

- notice ID;
- agreement and clause;
- sender;
- recipient;
- content version;
- required method;
- actual method;
- sent time;
- delivery state;
- deemed-received time where configured;
- response deadline;
- evidence.

65.10 Operational effect record

- effect ID;
- agreement and clause;
- effect type;
- target domain;
- affected entity;
- activation state;
- effective period;
- revocation state;
- audit reference.

66. Required Controlled Registries

67. Implementation Gates

Gate 1: Constitutional alignment

Confirm alignment with:

- Identity and Actor Model;
- Relationship Model;
- Record Stewardship Model;
- Claims and Authority Model;
- Permission Model;
- Financial Truth Model;
- External Adapter Model;
- AI Model;
- Audit Model;
- Security Model;
- Communication and Notice Model.

Gate 2: Agreement inventory

Inventory all current:

- boarding agreements;
- training agreements;
- lesson agreements;
- waivers;
- releases;
- emergency authorizations;
- payment authorizations;
- media consents;
- provider contracts;
- platform terms;
- policies;
- order forms;
- addenda;
- notices.

Gate 3: Agreement family and hierarchy map

Map master agreements, schedules, exhibits, order forms, addenda, and incorporated policies.

Gate 4: Template, clause, and version map

Map every template, clause version, exhibit, disclosure, language, and jurisdiction profile.

Gate 5: Party, subject, and capacity map

Map every signer, represented party, guardian, minor, owner, payer, guarantor, provider, beneficiary, and subject.

Gate 6: Authority map

Define authority evidence, verification, thresholds, and expiry.

Gate 7: Signature-provider boundary

Verify that DocuSign and any future provider remain adapters.

Gate 8: Derived-effect map

Identify every permission, relationship, obligation, notice, payment, schedule, and workflow created from agreement terms.

Gate 9: Notice model

Define notice methods, evidence, deadlines, delivery states, and failure handling.

Gate 10: Audit and evidence review

Verify full reconstruction of every execution, consent, notice, amendment, default, and termination event.

Gate 11: Minor and guardian review

Validate guardian authority, minor assent, Safe Sport implications, and age-of-majority transition.

Gate 12: Financial review

Validate deposits, fees, recurring-payment consent, guaranties, refunds, and responsible-party distinctions.

Gate 13: Privacy and consent review

Validate data-sharing, media, communication, optional consent, withdrawal, and consent receipts.

Gate 14: Security review

Validate authentication assurance, signature integrity, webhook verification, provider reconciliation, support restrictions, and abuse prevention.

Gate 15: Jurisdiction review

Identify and approve jurisdiction-specific requirements.

Gate 16: Migration and legacy review

Define treatment of legacy PDFs, paper agreements, missing versions, incomplete metadata, and historical signers.

Gate 17: Founder authorization

No implementation proceeds without explicit founder authorization.

68. Required Test Scenarios

1. Adult signs a boarding agreement for their own horse.
2. Guardian signs a lesson agreement for a minor.
3. Minor separately gives assent.
4. Two guardians are required to sign.
5. One guardian's authority is disputed.
6. Business manager signs without sufficient authority.
7. Business owner countersigns.
8. Horse owner is different from payer.
9. Payer is different from guarantor.
10. Payment-method holder is different from responsible party.
11. Agreement requires deposit before effectiveness.
12. One signer signs and another never does.
13. Agreement expires before countersignature.
14. Package changes after the first signer signs.
15. User declines optional media consent but accepts boarding terms.
16. User withdraws SMS marketing consent.
17. User withdraws media consent after prior publication.
18. Emergency medical authorization includes a spending cap.
19. Spending cap is amended.
20. Euthanasia authority is excluded.
21. Horse transfers to a new owner while old agreement remains historical.
22. Ownership-transfer conditions are not yet satisfied.
23. Agreement is terminated for nonpayment.
24. Agreement is suspended during a safety dispute.
25. Default is cured within the notice period.
26. Default is disputed.
27. Agreement renews with unchanged terms.
28. Agreement renews with material changes.
29. Evergreen agreement receives timely nonrenewal notice.
30. Addendum changes only one clause.
31. Full replacement agreement explicitly supersedes prior version.
32. User disputes signature authenticity.
33. User claims the wrong version was shown.
34. User claims authority had expired before signature.
35. Signature-provider webhook arrives twice.
36. Signature-provider webhook fails verification.
37. Signature provider is unavailable during signing.
38. Provider completion state conflicts with local state.

39. Wet-signature agreement is uploaded.
40. Original paper agreement remains in external custody.
41. Offline tablet signature synchronizes later.
42. Offline signature conflicts with a later online version.
43. Agreement is signed in two languages.
44. Translation differs from controlling version.
45. Minor reaches adulthood during agreement term.
46. Executor signs for deceased owner's estate.
47. Trustee authority expires.
48. Organization changes legal name.
49. Organization merges with another entity.
50. Barn operator changes but property owner does not.
51. Facility operator and trainer are separate parties.
52. Payment authorization is revoked.
53. Recurring-payment amount changes beyond the approved rule.
54. Record-access authorization expires.
55. Provider-access authorization is narrowed.
56. Support operator views but cannot sign.
57. Support operator attempts a prohibited payment authorization.
58. AI drafts an agreement but a human approves the template.
59. AI summarizes terms but cannot execute.
60. AI proposes a clause exception requiring legal review.
61. User accepts platform terms on mobile.
62. High-risk horse medical authorization requires MFA.
63. Agreement-derived permission ends when agreement terminates.
64. Agreement-derived financial obligation survives termination.
65. Agreement-derived relationship requires separate activation.
66. Agreement is archived after account closure.
67. Duplicate person identities merge without losing signature history.
68. Dispute places high-risk operational effects on hold.
69. Notice email bounces.
70. Notice is delivered but not opened.
71. Notice is contractually deemed received after a configured period.
72. Marketing opt-out does not suppress emergency notices.
73. A policy incorporated by reference changes after execution.
74. Mutable web terms cannot be reconstructed.
75. Clause version is retired after agreements already use it.
76. Legal hold prevents disposal.
77. Agreement package hash fails validation.
78. Agreement is cancelled before any signature.

- 79. Agreement is alleged void and moved to review without legal conclusion.
- 80. Force-majeure claim is opened and reviewed rather than automatically accepted.

69. Success Criteria

This model is successful when EquineSync can reliably answer:

- What exact agreement family exists?
- Which instrument and version control?
- Which clauses control?
- Who are the parties and subjects?
- Who signed?
- In what capacity?
- Under what authority?
- What was presented?
- What was acknowledged?
- What was consented to?
- What was authorized?
- What was refused?
- What notice was required and delivered?
- What conditions remain outstanding?
- What is currently effective?
- What obligations are due, performed, disputed, or surviving?
- What rights and restrictions remain active?
- What was amended?
- What was renewed?
- What was terminated?
- What survives termination?
- What operational effects derive from the agreement?
- Can every derived effect be traced to a clause?
- Can the agreement be reconstructed later?
- Can the system distinguish the signer from the represented party?
- Can consent be withdrawn without erasing history?
- Can provider failure occur without losing canonical truth?
- Can the agreement remain preserved after transfer, death, closure, dispute, or migration?

70. Non-Goals

This document does not itself:

- provide legal advice;
- determine enforceability;
- replace jurisdiction-specific counsel;

- authorize production schema;
- authorize migration;
- approve any template or clause;
- authorize automated legal drafting;
- authorize AI execution;
- activate DocuSign or another provider;
- activate recurring payments;
- adjudicate breach;
- determine damages;
- determine guardianship;
- determine fiduciary validity;
- determine whether a clause is void or voidable;
- authorize production mutation.

71. Constitutional Decision Summary

EquineSync adopts the following controlling decisions:

1. Agreements, consents, authorizations, acknowledgments, approvals, and notices are separate canonical concepts.
2. The agreement record is distinct from the rendered document.
3. Agreement families and instrument hierarchy must be explicit.
4. Every signer acts in an explicit capacity.
5. Every represented party remains distinct from the signer.
6. Authority must be evidenced and evaluated at action time.
7. High-impact execution preserves an authority snapshot.
8. The exact presentation and signature-time version must be preserved.
9. Executed text cannot be silently altered.
10. Clause versions and package manifests must remain traceable.
11. Amendments preserve originals.
12. Partial execution is not full execution.
13. Execution is not necessarily effectiveness.
14. Conditions to effectiveness must be explicit.
15. Refusal, failed delivery, and nonresponse remain distinct.
16. Optional consent must remain separable.
17. Consent receipts must preserve purpose and scope.
18. Agreement-derived permissions, relationships, obligations, and notices must remain traceable.
19. Every operational effect requires a ledger entry.
20. External signature providers are adapters.
21. Minor and guardian identities remain separate.
22. Organization administration does not equal signing authority.
23. Termination does not erase history.

24. Supersession must be explicit.
25. Disputed agreements remain preserved.
26. Material changes require appropriate new assent.
27. High-risk authorizations require appropriate assurance.
28. Notice is a distinct governed object.
29. AI may assist but may not independently approve or execute agreements.
30. Agreement truth survives account closure, transfer, death, migration, and provider change.

72. Controlled Review Checklist

Before adoption, reviewers must confirm:

- ☐ Identity and capacity terms align with the Identity and Actor Model.
- ☐ Agreement-derived relationships align with the Relationship Model.
- ☐ Retention, legal hold, and disposal align with the Record Stewardship Model.
- ☐ Disputes, authority claims, defaults, and review states align with the Claims and Authority Model.
- ☐ Permissions align with the Permission Model.
- ☐ Financial obligations align with the Financial Truth Model.
- ☐ Signature-provider boundaries align with the External Adapter Model.
- ☐ Audit events align with the Audit Model.
- ☐ Security controls align with the Security Model.
- ☐ Notice semantics align with the Communication and Notice Model.
- ☐ Minor and guardian rules are complete.
- ☐ Optional consent remains separable.
- ☐ Consent receipts are supported.
- ☐ Exact version and package preservation are guaranteed.
- ☐ Clause deviation and approval controls are defined.
- ☐ No silent amendment or supersession is possible.
- ☐ Offline and wet-signature workflows are governed.
- ☐ Webhook verification and idempotency are defined.
- ☐ Operational effect ledger rules are implementation-ready.
- ☐ Legacy agreement migration is planned.
- ☐ No implementation authority is implied by adoption.

73. Adoption State

Current State: FOUNDER_ACCEPTED_CONTROLLING_TEXT_ADOPTION_AND_LOCK_PENDING

Permitted next steps:

1. structural review;
2. terminology review;
3. cross-canon conflict review;

4. agreement-family inventory;
5. template and clause inventory;
6. agreement-effect mapping;
7. notice-model alignment;
8. jurisdiction-profile review;
9. implementation gap matrix;
10. founder review;
11. canon indexing;
12. dependency registration;
13. controlled lock.

Founder acceptance does not authorize implementation. Until separately adopted, locked, and implemented through an authorized phase, this document is not schema, migration, runtime, production, external-service, or public-launch authority.

74. Canonical Glossary

Agreement

A governed record of rights, duties, permissions, restrictions, commitments, conditions, and remedies among identified parties.

Agreement Family

A set of related instruments that collectively govern one relationship or transaction.

Agreement Instance

A specific generated agreement presented to identified parties.

Agreement Package

The complete set of instruments, disclosures, exhibits, and actions presented together.

Agreement Template

A reusable, version-controlled source used to generate agreement instances.

Acknowledgment

Confirmation of receipt, awareness, or understanding that does not necessarily constitute consent or contractual assent.

Amendment

A change to an existing agreement that preserves the original.

Approval

A decision allowing a draft, clause, exception, package, or action to proceed.

Authorization

A grant of operational authority for a defined action, subject, purpose, and period.

Authority Snapshot

The evidence and evaluation supporting a person's authority at a specific time.

Capacity

The role or legal position in which a person acts.

Clause

A discrete agreement provision with its own type, version, and effect.

Condition Precedent

An event that must occur before an agreement or obligation becomes effective.

Consent

A voluntary grant of permission for a defined purpose and scope.

Consent Receipt

The canonical evidence package showing what consent was requested, presented, chosen, and made effective.

Countersignature

A signature by an additional party required to complete execution.

Disclosure

Information presented to a party, sometimes requiring acknowledgment or separate assent.

Execution

Completion of required signature or acceptance events.

Notice

A governed communication intended to satisfy an agreement, legal, policy, or operational notice requirement.

Obligation

A required act, payment, delivery, restriction, or continuing duty.

Operational Effect Ledger

The canonical record of system effects activated or changed because of an agreement.

Party

A person or organization formally participating in an agreement.

Contractual Representation

A statement of fact made within an agreement. This is distinct from identity representation, in which one actor acts for another principal.

Rescission

A governed action intended to unwind or cancel an agreement, subject to authorized review.

Revocation

Withdrawal of previously granted authorization.

Signature Event

The recorded application of a signature or signature-equivalent action.

Supersession

Explicit replacement of some or all of an earlier instrument by a later instrument.

Termination

Ending some or all future effect of an agreement.

Warranty

A contractual assurance concerning a fact, condition, quality, or performance.

Withdrawal

A person's removal of consent.

75. Final Constitutional Principle

EquineSync must always preserve the difference between the agreement and its rendering, the family and its individual instruments, the party and the signer, the signer and the represented principal, the signature and the authority supporting it, the consent and the acknowledgment, the authorization and ownership, the notice and ordinary communication, execution and effectiveness, current operation and historical truth.

That distinction is the backbone of trustworthy boarding, training, lessons, horse care, emergency action, payments, transfers, privacy, communications, professional services, and every future agreement-driven workflow in EquineSync.

76. Version 2.1 Reconciliation Disposition

Version 2.1 incorporates the controlled cross-canon audit recommendations for:

1. current canonical names and versions;
2. removal of obsolete conditional adoption references;

3. explicit consent, privacy, permission, communication, and media ownership boundaries;
4. preservation of founder acceptance without implied adoption, lock, implementation, schema, migration, runtime, production, or public-launch authority.

MASTER_AGREEMENT_CONSENT_AND_AUTHORIZATION_MODEL_V2_1_FOUNDER_ACCEPTED_CONTROLLED_SUCCESSOR
